Distribution of Virginia Adjusted Gross Income by Income Class and Locality, 1983

John L. Knapp and Beverly H. Capone

INTRODUCTION

Administrative records from the Virginia Department of Taxation provide a useful source of information on local income distribution. This report is the twelfth in a series based on the Department's records. The first report covered the distribution of Virginia adjusted gross income (AGI)[1/] in 1972, and the second covered the distribution in 1973 with additional information on total AGI and number of tax returns beginning with 1963. The next nine reports covered the distribution of AGI in each year, 1974 through 1982; this report shows comparable data for 1983. This year, for the first time since 1977, the breakdown of AGI by income class has changed. For example, the lowest class in the 1982 study showed all returns reporting AGI of less than $3,000, whereas, in the 1983 study the lowest class shows all returns reporting AGI of less than $5,000.

Virginia AGI is defined as federal adjusted gross income with a few alterations. In 1983, federal AGI included most types of income except the following: 1) Social Security benefits and other transfer payments[2/]; 2) employer contributions to private pension and health plans; 3) non-cash imputed income; 4) income in-kind; 5) 60% of long-term capital gains; and 6) certain business expenses. The modifications used to derive Virginia AGI included adding interest from municipal bonds of other states, federal deductions allowed for a married couple when both work, and 30% of the federal deduction allowed under the Accelerated Cost Recovery System. Other modifications were the subtracting from federal AGI of the following items: Virginia state government retirement benefits, interest from federal obligations, and $400 for each taxpayer or spouse age 65 or over. Changes in tax laws have had some effect on the historical comparability of AGI. For example, beginning in 1982, up to $2,000 of payments made to an Individual Retirement Account (IRA) is deductible, even if the taxpayer is covered by an employer's pension plan. At the federal level, the number of returns claiming a deduction due to IRAs increased from 12.0 million in 1982 to 13.7 million in 1983. The total dollar ammount claimed for payments to IRAs rose from $28.3 billion in 1982 to $32.3 billion in 1983.[3/]

1/ In this report, AGI refers to Virginia adjusted gross income.

2/ Starting in 1984, some Social Security benefits will be included in federal AGI.

3/ Department of the Treasury, Internal Revenue Service, Statistics of Income Bulletin, Volume 4, No. 3, (Winter 1984-85), p 19.

April 1985

AGI data cover all individuals and married couples required to file a return for 1983, which included: 1) anyone who had Virginia income tax withheld or who paid an estimated income tax for 1983; 2) any individual with AGI more than $3,000; 3) a married couple with both persons under age 65 with a combined AGI more than $3,000; 4) a married couple with one spouse 65 or over with a combined AGI more than $3,500; and 5) a married couple with both persons 65 or over with a combined AGI more than $4,500.

In 1983, AGI totaled $48.3 billion and amounted to 73% of Virginia personal income. Personal income is a broad measure of income that includes transfer payments and certain types of non-cash income that are not taxable. The proportion of the population covered by the AGI data can be roughly estimated by comparing the reported number of personal and dependent exemptions with a separate count of the total population. In 1983, the number of exemptions was 4,834,850 or 87% of Virginia's 1983 population of 5,549,600[1/] as estimated by the Tayloe Murphy Institute.

A brief review of economic conditions in 1983 may help to place the figures in this report in perspective. In 1983 the national and state economies began a strong recovery from the recession that bottomed in November 1982. For the year as a whole, real gross state product, a measure of total output, rose 4.3%, slightly higher than the 1958-83 trend growth rate of 4.0% annually. Virginia nonagricultural wage and salary employment rose 3.1% compared to a 1.4% decline in the previous year. The state's unemployment rate, which averaged 6.1%, dropped 1.6% percentage points from the previous year. Inflation, as measured by the U.S. consumer price index (CPI), averaged 3.2%.

ANALYSIS

Introduction

The appendix tables contain data on all returns and on two subcomponents--married couple returns and individual returns. In addition, there is information on AGI per exemption and an index of income concentration. These measures are discussed in the following pages.

All Returns

Statewide, the median AGI per return was $15,949, up 4.3% from the preceding year. However, after adjustment for inflation, the median rose 1.0%. The overall county median was $17,024 compared to $14,704 for cities. (See Table A1.) One reason for this difference was that married couple returns, which tend to have higher incomes than individual returns, represented a larger proportion of the returns for the counties than for the cities. The highest income area, Fairfax County ($24,255), had a median AGI 2.5 times greater than the lowest area, Northampton County ($9,820). Other high income localities were Chesterfield County ($23,222), Prince William County ($22,751), Loudoun County ($21,465), and Manassas City ($21,008). All of the top five localities were located either in Northern Virginia or in the Richmond area. These high income localities usually remain in the top five, but the five lowest income localities

change yearly. Other low income localities were Accomack County ($10,351), Lunenburg County ($10,811), Brunswick County ($10,976), and Lee County ($11,274).

Together, the ten metropolitan statistical areas (MSAs)1/ had a median AGI of $17,353 compared to $13,452 for the non-MSA portions of the state. (See pages 32 and 33 for listings of localities contained in MSAs and planning districts.) Among the MSAs, the Virginia portion of the Washington, D.C.-Md.-Va. MSA 2/ had the highest median ($22,295). The lowest median was in the Virginia portion of the Johnson City-Kingsport-Bristol MSA ($13,001).

Among the twenty-two planning districts, the medians ranged from $22,387 in the Northern Virginia Planning District to $10,155 in the Accomack-Northampton Planning District.

In addition to providing median AGI, Table A1 contains information on the distribution of AGI. Statewide, 16.6% of the returns had AGI of less than $5,000; 17.0% had $5,000 to $9,999; 14.3% had $10,000 to $14,999; 11.1% had $15,000 to $19,999; 9.1% had $20,000 to $24,999; 7.6% had $25,000 to $29,999; 10.7% had $30,000 to $39,999; 6.1% had $40,000 to $49,999; 5.4% had $50,000 to $74,999; and 2.0% had $75,000 or more.

As might be expected, the locality with the highest median income had the largest percentage of returns in the highest AGI class. In Fairfax County, 5.4% of the returns showed incomes of $75,000 or more.

The median AGI on all returns is not a good proxy for median household money income. In 1979, the income year reported in the 1980 Census, Virginia median household income was $17,475--a figure 43% larger than 1979 median AGI on all returns ($12,188). Although there were many reasons for the difference, the principal one was that members of the same household often filed separately. An example of this would be a return filed by a child living in the same household with parents who also filed. The end result was that the number of returns exceeded the number of households by 9.2%.3/

Married Couple Returns

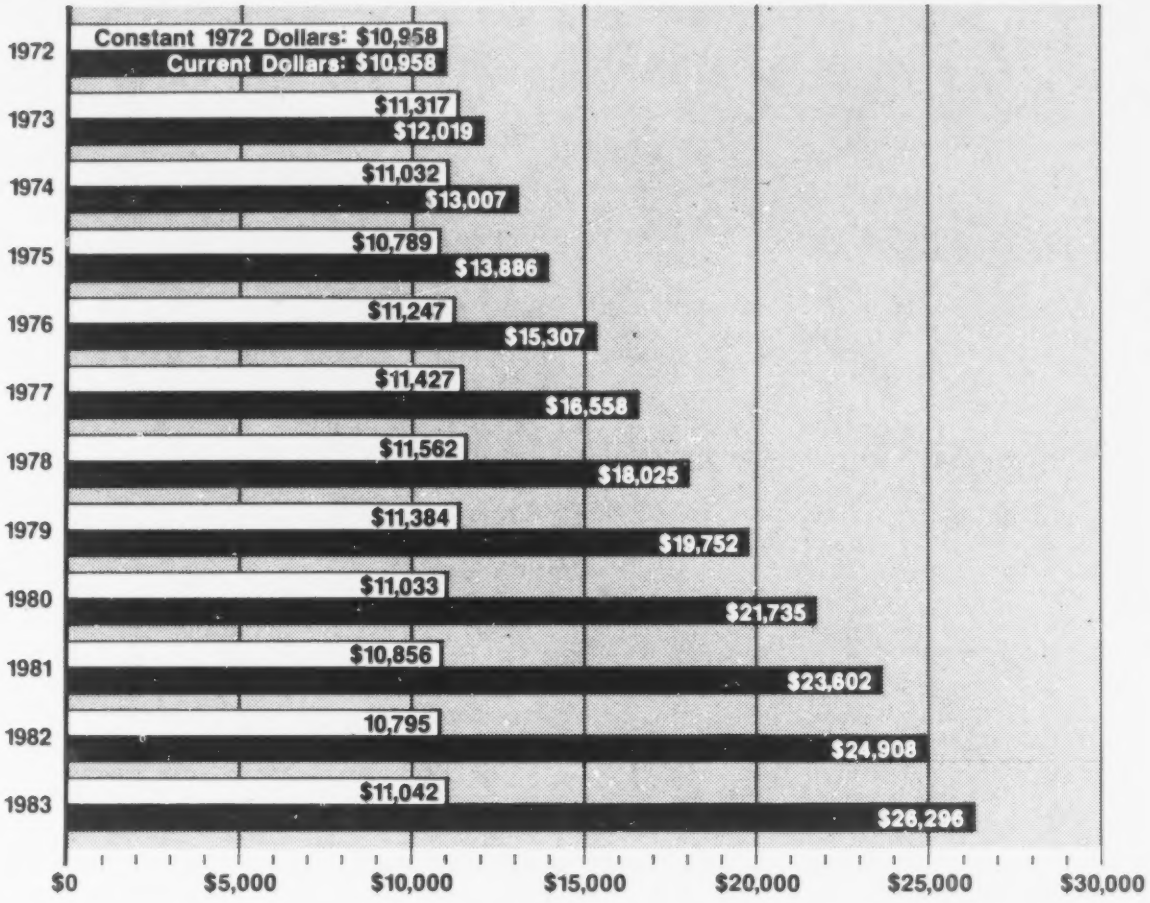
In 1983, returns filed by married couples accounted for 51% of all returns and 73% of the adjusted gross income. Married couple returns are composed of all returns filed by husband-wife families, including those with dependents.

1/ The MSA data refer only to the Virginia portion of those MSA's that include parts of other states. On June 30, 1983, the Richmond MSA and the Petersburg-Colonial Heights-Hopewell MSA were combined to form the Richmond-Petersburg MSA. At the same time, the Norfolk-Virginia Beach-Portsmouth MSA and the Newport News-Hampton MSA were combined to form the Norfolk-Virginia Beach-Newport News MSA. This report shows data for the four previously uncombined MSA's.

2/ Hereafter, the Virginia portion of the Washington, D.C.-Maryland-Virginia MSA is referred to as the Northern Virginia MSA.

3/ U.S. Bureau of the Census, 1980 Census of Population: General Social and Economic Characteristics, Virginia, PHC80-1-C48 (Washington, D.C.: U.S. Government Printing Office, July 1983), p. 58.

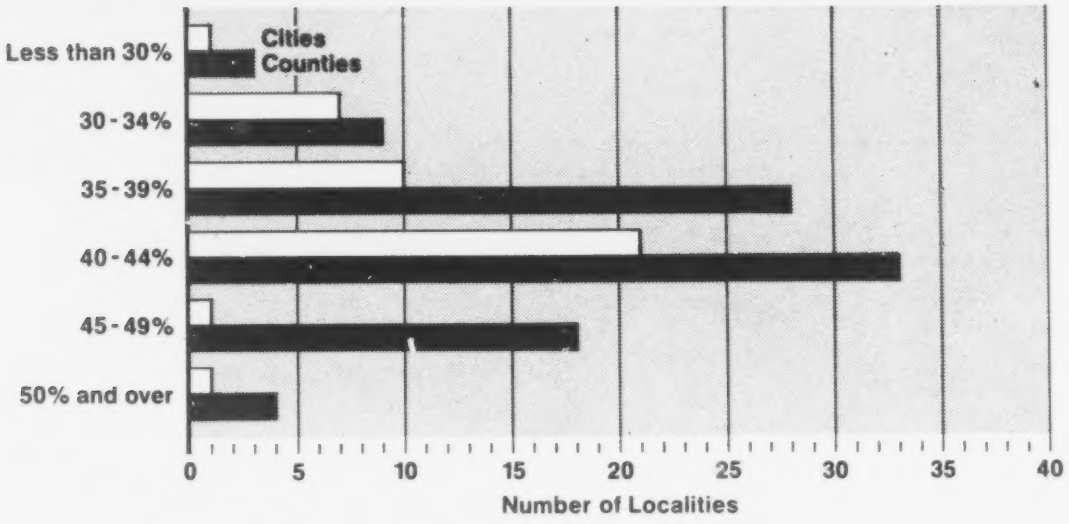
Figure 1.
Virginia Median AGI Per Married Return



Statewide, median AGI per married couple return was $26,296, a figure 5.6% higher than in 1982. However, after adjustment for changes in purchasing power, median income rose by 2.3%. Since the beginning of this series in 1972, there has been a large rise in AGI as measured in current dollars. (See Figure 1.) However, in terms of constant dollars adjusted for changes in the CPI, there has been a slight rise; over the ten year period real median AGI rose by 0.8%.

From 1978 to 1983, the percentage change in current dollar AGI reported on married returns ranged from 53.7% in New Kent County to 15.0% in Buchanan County. (See Table A2.) The largest change experienced by a city was 52.2% for Manassas City. Dickenson County (53.1%) and Fauquier County (51.2%) were the only other localities to report increases exceeding 50.0%. Tazewell County (23.4%) was a distant second for the lowest rise in nominal AGI. Figure 2 shows the number of localities in 6 growth categories: less than 30%, 30-34%, 35-39%, 40-44%, 45-49%, and 50% and over.

Figure 2.
Growth in Median AGI for Married Couple Returns, 1978-1983



The 1983 married return median AGI for all counties was $26,906, and that for the cities was $25,644. (See Table A3.) All of the five highest localities were in Northern Virginia. Fairfax County ($43,404) and Fairfax City ($39,133) led, followed by Arlington County ($37,686), Prince William County ($35,737), and Alexandria City ($35,430). The five lowest localities were the counties of Lee ($15,246), Charlotte ($15,716), Grayson ($15,923), Northampton ($16,042), and Buckingham ($16,123).

The married return median AGI in the MSA portion of the state was $29,653 compared to $20,553 for the non-MSA portion. Seven out of every ten Virginians live in an MSA. Among the MSAs, the Northern Virginia MSA had the highest median ($39,477) followed distantly by Richmond ($29,857). The lowest median was in the Virginia portion of the Johnson City-Kingsport-Bristol MSA ($17,944).

To a certain extent, the variation among MSAs in median AGI reflects differences in cost of living. When the data are adjusted using a relative price index, the Northern Virginia portion of the Washington, D.C.-Md.-Va. MSA remains the highest income metropolitan area. (See Table 1.) However, the adjustment narrows the differences among areas. In actual dollars, the ratio of highest (Northern Virginia) to lowest[1/] (Lynchburg) was 1.64 to 1. After adjustment for price differences, the ratio of highest (Northern Virginia) to lowest (Charlottesville) was 1.39 to 1.

Among the planning districts, the married return median ranged from $39,940 in the Northern Virginia Planning District to $17,277 in the Accomack-Northampton Planning District.

1/ This comparison excludes the Danville and Johnson City-Kingsport-Bristol MSAs because of the unavailability of price indexes for them.

Table 1.
AGI on Married Couple Returns Adjusted for Price Differences Among MSAs, 1983

	Median AGI on Married Couple Returns, Actual Dollars		Relative Consumer Price Index[a] (All Metropolitan Areas = 100[b])	Median AGI on Married Couple Returns, Dollars of Constant Purchasing Power	
	Amount	Index (MSA Median = 100)		Amount	Index (MSA Median = 100)

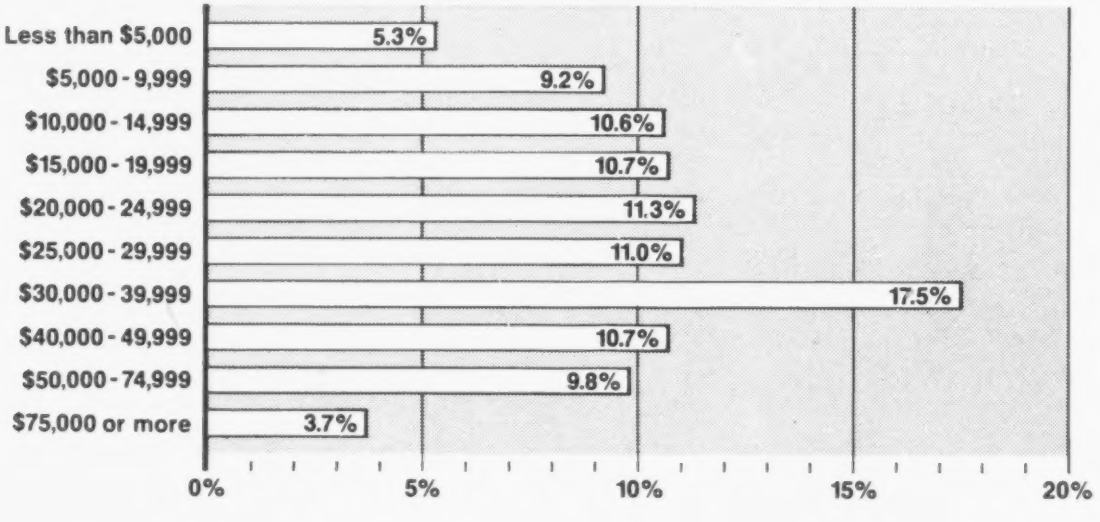
Figure 3.
Distribution of Virginia Married Returns by AGI Class



Statewide, 5.3% of the returns filed by married couples had AGI of less than $5,000; 9.2% had $5,000 to $9,999; 10.6% had $10,000 to $14,999; 10.7% had $15,000 to $19,999; 11.3% had $20,000 to $24,999; 11.0% had $25,000 to $29,999; 17.5% had $30,000 to $39,999; 10.7% had $40,000 to $49,999; 9.8% had $50,000 to $74,999; and 3.7% had $75,000 or more. (See Figure 3.) The greatest concentration of high incomes occurred in Fairfax County where 38.6% of the returns found were in the two income classes above $49,999.

Median AGI reported on married couple returns is a fairly good proxy for median family Census money income even though AGI differs from Census money income and married couples are a subset of all families.1/ According to the 1980 Census, Virginia median family income in 1979 was $20,018. In 1979, median AGI reported by married couple families was $19,752. Thus, median AGI was 99% of the Census figure. For individual counties and cities, the percentage varied depending on local conditions such as the population living in poverty, the number of military personnel, the number of persons receiving transfer payments (e.g., Social Security benefits and welfare assistance), and the accuracy of geographic coding of tax returns.

Individual Returns

Tax returns of single, divorced, separated, or widowed taxpayers are classified as individual returns. In 1983, statewide median AGI for individual returns was $9,298, an increase of 3.8% over 1982. After adjustment for inflation, median AGI increased by 0.6%. The median for counties was $9,283, and that for cities was $9,351. (See Table A4.) The five highest localities were Arlington County ($16,223), Alexandria City ($15,595), Falls Church City ($12,336), Fairfax County ($12,064), and Fairfax City ($11,408). The five lowest localities were Northampton County ($6,809), Lee County ($6,816), Accomack County ($6,981), Wythe County ($7,012), and Montgomery County ($7,040).

The individual return median for all MSAs was $9,909, and for non-MSAs it was $7,860. The Northern Virginia MSA had the highest median ($12,856), and the Virginia portion of the Johnson City-Kingsport-Bristol MSA had the lowest figure ($7,772).

Among the planning districts, the medians ranged from $12,987 in the Northern Virginia Planning District to $6,930 in the Accomack-Northampton Planning District.

AGI Per Exemption

Table A5 shows AGI per exemption. To reduce double counting, the extra exemptions for age and blindness have been excluded. However, some double counting remains because some children with taxable income are counted twice--once on their parents' returns and again on their own.

AGI per exemption is similar to a per capita measure except the divisor contains only the population with adjusted gross income rather than the total population. For the state as a whole, 1983 AGI per exemption was $9,996, up 7.4%

1/ The Census definition of family includes families with only one spouse present, whereas Virginia AGI married returns are limited to husband-wife families that file returns.

over 1982. For counties, the figure was $10,040 and for cities, $9,701. (See Table A5.) Among localities, the five highest were Arlington County ($16,095), Alexandria City ($14,912), Fairfax County ($14,098), Falls Church City ($13,430), and Fairfax City ($12,874). The five lowest localities were the counties of Lunenburg ($5,939), Charlotte ($5,940), Brunswick ($6,016), Buckingham ($6,046), and Grayson ($6,063).

Variation in AGI per exemption among localities may be measured in several ways. The simplest approach is to compute the ratio of the highest to the lowest observation. In 1983, the ratio was $16,095 to $5,939 or 2.71 to 1. A more sophisticated measure is the coefficient of variation, which shows the standard deviation as a percentage of the mean. The higher the value, the greater the variation. In 1983, the coefficient of variation was 21.6%, virtually unchanged from the results for earlier years.

AGI per exemption was $10,828 in the MSA portion of the state compared to $7,644 in the non-MSA portion. Among the MSAs, the Virginia portion of the Washington, D.C.-Md.-Va. MSA with an AGI per exemption of $13,578 outstripped the other MSAs by a wide margin. The Johnson City-Kingsport-Bristol MSA had the lowest AGI per exemption ($7,421).

Among the planning districts, AGI per exemption was highest in the Northern Virginia Planning District ($13,727), followed distantly by the Richmond Planning District ($10,557). The Southside Planning District had the lowest figure ($6,409).

Index of Income Concentration [1/]

An index of income concentration for all returns is shown in Table A6. The index is a measure of the equality of income distribution. If all taxpayers had the same income, the index would be zero. The greater the inequality of income distribution, the higher the value of the index.

In 1983, the state index of income concentration average was 0.344. Among localities, the index ranged in value from 0.406 in Fauquier County to 0.278 in Patrick County. Generally, the large central cities had greater inequality than their associated suburbs. For example, Richmond City had an index of 0.362 compared to 0.300 in Chesterfield County, 0.322 in Hanover County, and 0.324 in Henrico County.

The MSA and non-MSA portions of the state had similar indexes, 0.340 and 0.326, respectively. Among the ten MSAs, the indexes showed little variation, except for the Charlottesville MSA, which was higher than the other metropolitan areas.

1/ Index of income concentration = $1/2 \sum_{i=1}^{k} \left| X_i - Y_i \right|$ where X_i and Y_i are uncumulated percentages of the distribution of total returns by AGI class (X) and the distribution of total AGI by AGI class (Y). For a description of the method of computation, see U.S. Bureau of the Census, The Methods and Materials of Demography by Henry S. Shryock, Jacob S. Siegel and associates. (Washington, D.C.: Government Printing Office, 1971), pp. 178-80.

Among the twenty-two planning districts, the greatest inequality of income was in the Rappahannock-Rapidan Planning District (0.372), followed by the Thomas Jefferson Planning District (0.354) and the Northern Neck Planning District (0.350). The least amount of inequality occurred in the Southside Planning District (0.305).

COMPARISONS OF INCOME CONCEPTS

Census Money Income

Adjusted gross income is not the same as money income reported by the Bureau of the Census. In 1979, total AGI was 84% of Census total money income for Virginia.[1/] Unlike Census money income, AGI excludes transfer payments such as Social Security benefits, welfare payments, and unemployment compensation. In addition, AGI does not cover persons with income below the filing requirement. Persons receiving transfer payments and those with income below the filing requirement are included in the tax statistics only if they had some additional taxable income or had to file in order to receive a refund for tax withheld.

AGI also excludes income of armed forces personnel who retain legal residence in another state. The omission of this military income results in the underreporting of AGI in areas with a dense concentration of military personnel, such as Prince George County, Norfolk City, and Virginia Beach City. Furthermore, since non-military income and income of the spouse are taxable, the tax statistics may exaggerate the number of low AGI returns in these areas.

AGI does include certain capital gains, an income category not included in the definition of Census money income. At the state level, AGI also contains some nonresident income, whereas Census income is restricted to resident income.

A final difference between the two concepts is the reporting unit. The principal Census reporting units are families, unrelated individuals, and households. The major tax reporting units are individual returns and married couple returns. Married couple returns are further subdivided into joint, combined, and separate returns. None of the tax units is entirely comparable with any Census unit.

Personal Income

AGI differs also from the concept of personal income developed by the U.S. Department of Commerce, Bureau of Economic Analysis (BEA). Personal income is a broader concept than either Census money income or AGI. Unlike AGI, personal income includes: 1) all transfer payments such as Social Security and unemployment benefits; 2) certain fringe benefits; 3) imputed income such as wages and salaries paid in-kind, the net rental value of owner-occupied houses, the net value of food and fuel produced and consumed on farms, and imputed interest earned from financial intermediaries; 4) dividends excluded from taxation; and 5) tax-exempt interest and dividend distributions. On the other hand, AGI includes certain items excluded from personal income: 1) personal

---

1/ U.S. Bureau of the Census, 1980 Census of Population: General Social and Economic Characteristics, pp. 11, 16.

contributions for social insurance (principally, employee Social Security taxes and federal employee retirement payments); and 2) all of short-term capital gains and 40% of long-term capital gains. Furthermore, there are differences in coverage. Personal income includes the income of certain categories not contained in AGI, the most important of which are low income persons not required to file a state tax return, non-resident members of the armed forces stationed in Virginia, and private trust, pension, health, and welfare funds. As previously mentioned, in 1983 state AGI reported on Virginia tax returns was 73% of total personal income.

LIMITATIONS OF THE DATA

The major limitations are the inaccuracy of some of the geographic coding, the treatment of data for married couples filing separate returns, and the method of deriving medians.

Geographic coding of the tax returns may be a problem in a few localities. Although taxpayers are required to show their city or county of residence, some taxpayers fail to provide correct information. Confusion of post office address with place of residence is the usual source of incorrect information.

Married couples can file in one of three ways--by using a joint return, a combined return, or separate returns. For 1983, the great majority (93%) selected either the joint return or the combined return. The Department of Taxation statistics do not match the separate returns for each married couple. In the absence of matching, it was assumed for the purpose of calculating medians for married returns that within each AGI class two separate returns were equivalent to one joint or combined return. Although unavoidable, this was an extreme assumption since the more likely case is that a husband's AGI would fall in a different class than his wife's AGI.

Since all medians were derived from grouped data, it was necessary to make an assumption concerning the distribution of income within the class interval containing the median. In the absence of additional information, a uniform distribution was assumed. This procedure was probably adequate in most cases, but derivation of the medians from ungrouped data would have been preferable.

Table A1.
Adjusted Gross Income on All Returns, 1983

a/ Number of returns adusted by counting two married separate returns as equivalent to one married joint or combined return.

b/ Details may not add to 100.0 due to rounding.

c/ Returns unassigned to geographic areas because the proper city or county could not be ascertained or because the returns were filed by nonresidents.

d/ Appomattox County was removed from the Lynchburg MSA on June 30, 1983.

e/ On June 30, 1983 the Norfolk-Virginia Beach-Portsmouth MSA and the Newport News-Hampton MSA were combined to form the Norfolk-Virginia Beach-Newport News MSA. This report shows data for the uncombined areas.

f/ Stafford County and Calvert County, Md. were added to the Northern Virginia MSA on June 30, 1983.

g/ On June 30, 1983 the Petersburg-Colonial Heights-Hopewell MSA and the Richmond MSA were combined to form the Richmond-Petersburg MSA. This report shows data for the uncombined areas.

h/ Craig County was removed from the Roanoke MSA on June 30, 1983.

a/ Number of returns adusted by counting two married separate returns as equivalent to one married joint or combined return.

b/ Details may not add to 100.0 due to rounding.

c/ Returns unassigned to geographic areas because the proper city or county could not be ascertained or because the returns were filed by nonresidents.

d/ Appomattox County was removed from the Lynchburg MSA on June 30, 1983.

e/ On June 30, 1983 the Norfolk-Virginia Beach-Portsmouth MSA and the Newport News-Hampton MSA were combined to form the Norfolk-Virginia Beach-Newport News MSA. This report shows data for the uncombined areas.

f/ Stafford County and Calvert County, Md. were added to the Northern Virginia MSA on June 30, 1983.

g/ On June 30, 1983 the Petersburg-Colonial Heights-Hopewell MSA and the Richmond MSA were combined to form the Richmond-Petersburg MSA. This report shows data for the uncombined areas.

h/ Craig County was removed from the Roanoke MSA on June 30, 1983.
